"TACI-ligand interactions are required for T cell activation and collagen-induced arthritis in mice.";
Nat. Immunol. 2:632-637(2001).
-!- FUNCTION: Receptor for TMFSF13/APRIL and TMFSF13B/TALL1/BAFF/BLYS that binds both ligands with similar high affinity. Mediates calcineurin-dependent activation of NF-AT, as well as activation of NF-kappa-B and AP-1. Involved in the stimulation of B- and T-cell function and the regulation of humoral immunity (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=20341628; PubMed=10880535;

AND PCSA/SHORT, ARE PRODUCTS: AT LEAST 2 ISOFORMS; PCSB/LONG (SHOWN HERE)

AND PCSA/SHORT, ARE PRODUCED BY ALTIENDATIVE SPLICING.

-!- TISSUE SPECIFICITY: PCSA IS EXPRESSED IN MOST TISSUES BUT IS MOST ABUNDANT IN THE INTESTINE AND ADRENALS. PCSB IS EXPRESSED IN THE INTESTINE, ADDRENALS AND LUNG BUT NOT IN THE BRAIN.

-!- DEVELOPMENTAL STAGE: WEAKLY EXPRESSED THROUGHOUT THE EMBRYO, EXCEPT IN THE DEVELOPING NERVOUS SYSTEM, THE RIAB AND THE LIVER, BUT MARKEDLY UPREGULATED AT DISCRETE SITES DURING DEVELOPMENT. AT E6.5, PROMINENT EXPRESSION OBSERVED IN DIFFERENCIATED DECIDUA. AT E7.5, INTENSE EXPRESSION IN EXTREAMRYONIC ENDODERM, AMNION AND NASCENT MESODERM. AT 8.5, ABUNDANT EXPRESSION IN SOMITES AND YOLK SOC FOLLOWED BY A CONFINATION TO DERMAMYOTOME COMPARTMENT. BETWEEN E9.5 AND E11.5, ABUNDANT EXPRESSION IN AER (THICKENED ECTODERMAL CELLS OF LIMB BUDS). AT E12.5, EXPRESSION IN THE LIMBS IS CONFINED TO THE CONDENSING MESENCHYM SURROUNDING THE CARTILAGE. AT THIS STAGE, STRONG EXPRESSION ALSO DETECTED IN VERTEBRAL AND FACIAL CARTILAGE PRIMORDIA AND IN THE MUSCLE OF THE TONGUE. AT E16.5, ABUNDANT EXPRESSION IN EPITHELIAL CELLS OF THE INTESTINAL VILLI. CARTILAGE PRIMORDIA AND IN THE MUSCLE OF THE TONGUE. AT E16.5, ABUNDANT EXPRESSION IN EPITHELIAL CELLS OF THE INTESTINAL VILLI. CARTILAGE PRIMORDIA AND IN THE MUSCLE OF THE INTESTINAL VILLI. SOFORM A IS MOST ABUNDANT AT ALL STAGES BUT SIGNIFICANT LEVELS OF ISOFORM B OCCUR AT E12.5.

--- DOMAIN: THE PROPEPTIDE DOMAIN ACTS AS AN INTRAMOLECULAR CHAPERONE ASSISTING THE FOLDING OF THE ZYMOGEN WITHIN THE ENDOPLASMIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rancourt S.L., Rancourt D.E.;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: LIKELY TO REPRESENT A WIDESPREAD ENDOPROTEASE ACTIVITY WITHIN THE CONSTITUTIVE AND REGULATED SECRETORY PATHWAY. CAPABLE OF CLEAVAGE AT THE RX(K/R)R CONSENSUS MOTIF. MAY BE RESPONSIBLE FOR THE MATURATION OF GASTROINTESTINAL PEPTIDES. MAY BE INVOLVED IN THE CELLULAR PROLIFERATION OF ADRENAL CORTEX VIA THE ACTIVATION OF GROWTH FACTORS.

CAPALLYTIC ACTIVITY: RELEASE OF MATURE PROTEINS FROM THEIR PROPROTEINS BY CLEAVAGE OF ARG-XAA-YAA-ARG- |-ZAA BONDS, WHERE XAJ CAN BE ANY AMINO ACID AND YAA IS ARG OR LYS.

SUBCELLULAR LOCATION: PCSA IS SECRETED THROUGH THE REGULATED SECRETORY PATHWAY. PCSB IS A TYPE I MEMBRANE PROTEIN LOCALIZED TO A PARANUCLEAR POST-GOLGI NETWORK COMPARTMENT IN COMMUNICATION WITH A PARANUCLEAR POST-GOLGI NETWORK COMPARTMENT IN COMMUNICATION WITH A PARANUCLEAR POST-GOLGI NETWORK COMPARTMENT IN COMMUNICATION WITH

Science 290:523-527(2000).

FUNCTION: Receptor for EDA isoform A2, but not f.
A1. Mediates the activation of NF kappa-B. Activ
be mediated by binding to TRAF6.

-I- SUBCULULAR LOCATION: Type III membrane protein.
-I- SIMILARITY: CONTAINS 3 TNFR-CYS REPEATS.

C -!- FUNCTION: APOMUCIN IS PART OF MUCIN, THE MAJOR GLYCOPROTEIN
SYNTHESIZED AND SECRETED BY MUCOUS CELLS OF THE SUBMAXILLARY
C GLAND. ITS HIGHLY VISCOUS AQUEOUS SOLUTIONS SERVE TO LUBRICATE
CTHE ORAL CAVITY AND TO PROTECT IT FROM THE EXTERNAL
ENVIRONMENT.
C -!- SUBURIT: INTERMOLECULAR DISULFIDE BONDS COULD HELP MAINTAIN A
MULTIMERIC MUCIN STRUCTURE.
C -!- SUBCELLULAR LOCATION: Secreted.
C -!- SUBCELLULAR LOCATION: Secreted.
C -!- TISSUE SPECIFICITY: SUBMAXILLARY MUCOSAE.
C -!- DOMAIN: CONTAINS TANDEMLY REPEATED, IDENTICAL SEQUENCES OF 81
RESIDUES.
C -!- PTM: EXTENSIVELY O-LINKED GLYCOSYLATED ON SER AND THR RESIDUES OF
```

-i- PTM: EXTENSIVELY O-LINKED GLYCOSYLATED ON SER AND THR RESIDUES OF THE REPEAT UNITS. HIGHEST GLYCOSYLATION APPEARS TO OCCUR ON SER RESIDUES WHICH HAVE GLY AT POSITIONS AT +2 OR -2 FROM THE GLYCOSYLATION SITE OR, WHERE GLY IS THE PENULTIMATE RESIDUE. THE PRESENCE OF PROLINE (USUALLY AT POSITION +3 OR -3) APPEARS TO ALSO ENHANCE GLYCOSYLATION.

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN ENDOTHELIAL CELLS
TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN ENDOTHELIAL CELLS
AND THEIR PROGENITORS, THE ANGIOBLASTS. HAS BEEN DIRECTLY FOUND
IN PLACENTA AND LUNG, WITH A LOWER LEVEL IN UMBILICAL VEIN
ENDOTHELIAL CELLS, BRAIN AND KLUNEY
DISEASE: DEFECTS IN TEK ARE A CAUSE OF DOMINANTLY INHERITED VENOUS
MALFORMATIONS (VMCM1), AN ERROR OF VASCULAR MORPHOGENESIS
CHARACTERIZED BY DILATED, SERPIGINOUS CHANNELS.
SIMILARITY: BELONGS TO THE TYR FAMILY OF PROTEIN KINASES. TIE
SUBERMILY.
SIMILARITY: CONTAINS 2 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAINS.
SIMILARITY: CONTAINS 3 FIBRONECTIN TYPE III-LIKE DOMAINS.
SIMILARITY: CONTAINS 3 EGF-LIKE DOMAINS.

"E210K mutation in the gene encoding the beta3 chain of laminin-5

(LAMB3) is predictive of a phenotype of generalized atrophic benign epidermolysis bullosa.";

Br. J. Dermatol. 139:325-331 (1998).

Br. J. Dermatol. 139:325-331 (1998).

It hought to mediate the attachment, migration, and organization of cells into tissues during embryonic development by interacting with other extracellular matrix components.

--- SUBUNIT: Laminin is a complex sylvoprotein, consisting of three different polypeptide chains (alpha, beta, gamma), which are bound to each other by disulfide bonds into a cross-shaped molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE=96055522; PubMed=7550237;
